

We have launched a great selection of solar powered lighting options to brighten up your development signage at night.

These are a great solution to light up signage, add light to dark customer areas and making your hoarding messaging pop at night.

- Easy and cost-effective to install
- No need for electricians or mains power source
- Day & Night Sensors with timers
- Fit retrospectively - can be added to existing signage
- Reusable for next time
- Over 9hrs of light on a single solar charge*
- Choice of colours and either ice white or warm white light
- Very low voltage, solar powered.
- All from as little as £395.00

*During winter months, depending on weather and solar panel wattage used, there will be variation. Minimum of 5 hours light after dark during the winter. Perfect for early evenings. Timer function can increase light during early evening and morning.
